Table of contents

1 Overview	1
2 Origin	1
3 Insertion	1
4 Innervation	1
5 Action	1

1 Overview

Muscle	Origin	Insertion	Innervation	Action
Gluteus Minimus	Ilium gluteal surface (inferior to gluteus medius origin)	Greater trochanter (anterolateral surface)	Superior gluteal n. L4 - S1	Entire mm.: Abduction, Frontal stabilization Anterior fibers: Flexion, IR Posterior fibers: Extension, ER

2 Origin

Ilium (gluteal surface below the origin of gluteus medius)¹

3 Insertion

Greater trochanter of the femur (anterolateral surface)¹

4 Innervation

The gluteus maximus muscle is innervated by nerve roots L4, L5, and S1, via the Superior gluteal nerve¹

5 Action

- Entire muscle: abducts the hip, stabilizes the pelvis in the coronal plane¹
- Anterior fibers: flexion and internal rotation¹

- Posterior fibers: extension and external rotation¹
