

Schema

Nathaniel Yomogida, SPT

Chloë Kerstein, SPT

Table of contents

Schema: serve to provide a basis for movement decisions and are stored in memory for the reproduction of movement¹

Schema can be divided into Recall schema and recognition schema

- Recall schema: the relationship among past parameters, past initial conditions, and the movement outcomes produced by these combinations¹
 - Recognition schema: the relationship among past initial conditions, past movement outcomes, and the sensory consequences produced by these combinations¹
