## **Shoulder Labrum**

Nathaniel Yomogida, SPT Chloë Kerstein, SPT

## Table of contents

1 SLAP Lesion 1

## 1 SLAP Lesion

- The compression rotation test
  - "was performed with the patient supine and by elevating the patient's arm 90° and rotating the arm while applying an axial load"
  - "The test was positive if the patient reported pain or a click deep in the shoulder" 1
- $\bullet$  "Active compression test was performed with the affected arm slightly adducted and forward-flexed 90°"
  - "The patient tried to elevate the arm with the palm up and then with the thumb pointing downward against resistance" 1
  - Positive: "Pain in the front of the arm with either maneuver was noted, recorded" 1
- The anterior slide test<sup>1</sup>
  - "The patient stood with the hand on the hip of the affected side, and the examiner applied an axial load along the humerus" 1
  - "The test was considered positive when this maneuver produced pain or a click."
